

Media competences through photography

Today's children are growing up surrounded by media. They use it intuitively and without fear. But in order to make their use safe, effective and constructive the handling with media should be learned just as other any other skill. Through media education in kindergartens children can learn about the use and creation of media and its content. The focus in kindergartens should be, in contrast with the usual use at home, not only on the proper handling of media but much more on using media as tools to realize one's own ideas and goals. Through early media education kindergartens can help close the digital divide and help all children lay good foundations for later media literacy and skills. As part of the Eduskills + Media project, we developed materials for early media education with the help of photography, as photography is an ideal medium for an active and creative approach to the media. Ideas for activities, information for educators and materials ready for printing are available on the Eduskills + Media portal.

www.eduskills.plus/media - What to find here?

- didactic preparations for more than 50 photographic activities
 - information material for educators and teachers
 - photo library and worksheets

Eduskills + Media is part of the Eduskills + portal, where you can find interesting educational projects, practical learning materials and deepen your knowledge of current educational topics.
